# I. Introduction

The operation of the full Medical Literature Monitoring (MLM) service started on 1 September 2015 and was extended on 1 June 2020 and covers active chemical substance groups 1-309, and herbal substance groups 1-100. The MLM Service was further extended on 1 April 2024 to include searching in MEDLINE. The substance groups are published at the following link "Medical literature monitoring: substance and herbal substance groups" on the dedicated MLM webpage.

This document outlines the search strategy for each of the substance groups as part of the Agency's activities set out in Article 27 of Regulation (EC) 726/2014 used to undertake the daily search in MEDLINE. Please note that 'daily' refers to calendar days with the exception of weekends (Saturday and Sunday).

The search strategy was created in MEDLINE and uses the syntax and terminology of the MEDLINE search engine.

# II. General Principles

- The search for each substance group has been prepared to be exhaustive in line with the requirements of the Guideline on good pharmacovigilance practices (GVP) Module VI – Collection, management and submission of reports of suspected adverse reactions to medicinal products (Rev 2), hereafter referred to as 'GVP module VI', chapter VI.App2.3.2.
- The most comprehensive search strategy targeted to achieve precise results as regards the areas to be monitored have been defined for each substance group and for the literature reference databases as outlined in the description of the journal/reference databases used as published at the dedicated MLM webpage.
- The search parameters aim to identify and retrieve:
  - suspected adverse reactions originating from spontaneous reports and solicited reports in humans (see GVP module VI, chapter VI.B.1.1. and VI.B.1.2.) and
  - special situations such as lack of therapeutic efficacy, use of a medicinal product during pregnancy and breastfeeding, use of a medicinal product in a paediatric or elderly population, reports of off-label use, misuse, abuse, overdose, medication error as well as occupational exposure associated with suspected adverse reactions.

    The exact scope is defined in the "Detailed guide regarding the monitoring of medical literature and the entry of relevant information into the EudraVigilance database by the European Medicines Agency" (hereafter referred to as "Detailed Guide").
- Each search strategy is routinely reviewed and updated where necessary to improve search precision or to align with any updates to the thesaurus used for indexing in the journal/reference databses used.
- Each search strategy is applied to the journal/reference databases according to the predefined periodicity as outlined in the Detailed Guide.
- Each search is conducted with a "human" filter and is limited to articles published in the current or previous year.

  - Searching is performed without enabling language filters to retrieve all articles that meet the search criteria.
- The search strategy for each substance group is constituted of multiple components such as the International Nonproprietary Name (INN) as well as alternative names (variants) for the substances based on the information available in the Extended EudraVigilance Medicinal Product Dictionary (xEVMPD).

  Alternative names include medicinal product names (brand names) based on the information submitted by marketing authorisation holders in accordance with Article 57(2), second subparagraph of Regulation (EC) 726/2004 as well as variants for medicinal product names that have been reported in ICSRs to EudraVigilance.
- The additional core search strategy, applied to all substance groups, in order to increase the precision of the search in each active substance group in Boolean format is as follows:

  *AND (Drug-Related Side Effects and Adverse Reactions [MeSH Terms] OR adverse drug reaction[Title/Abstract] OR "adverse effects"[Subheading] OR adverse[Title/Abstract] OR side effects[Title/Abstract] OR side effect[Title/Abstract] OR drug overdose[MeSH Terms] OR drug overdose[Title/Abstract] OR drug overdose*[Title/Abstract] OR drug misuse[MeSH Terms] OR drug misuse[Title/Abstract] OR misus*[Title/Abstract] OR "Substance-Related Disorders"[MeSH Terms] OR drug abuse[Title/Abstract] OR substance abuse[Title/Abstract] OR abus*[Title/Abstract] OR pregnancy[MeSH Terms] OR pregnancy[Title/Abstract] OR pregnan*[Title/Abstract] OR Pregnancy Complications[MeSH Terms] OR "Lactation"[MeSH Terms] OR "Breast Feeding"[MeSH Terms] OR ("milk, human"[MeSH Terms] AND "Bodily Secretions"[MeSH Terms]) OR "Fertility"[MeSH Terms] OR "Reproduction"[MeSH Terms] OR "Fetus"[MeSH Terms] OR "Embryonic Structures"[MeSH Terms] OR "Teratogens"[MeSH:NoExp] OR "Teratogenesis"[MeSH:NoExp] OR terato*[Title/Abstract] OR drug efficacy[Title/Abstract] OR "Substance Withdrawal Syndrome"[MeSH Terms] OR "Medication Errors"[MeSH Terms] OR "Death"[MeSH Terms] OR death*[Title/Abstract] OR "Fatal Outcome"[MeSH:NoExp] OR fatal*[Title/Abstract] OR "Drug Interactions"[MeSH Terms] OR Drug Interaction*[Title/Abstract] OR "Carcinogens"[MeSH:NoExp] OR carcinogen*[Title/Abstract] OR "Mutagens"[MeSH:NoExp] OR "Mutagenesis"[MeSH:NoExp] OR mutagen*[Title/Abstract] OR "Off-Label Use"[MeSH Terms] OR "Occupational Exposure"[MeSH Terms] OR "toxicity"[Subheading] OR toxic*[Title/Abstract] OR pharmacotox*[Title/Abstract] OR "Neurotoxicity Syndromes"[MeSH:NoExp] OR Neurotox*[Title/Abstract] OR "Cardiotoxicity"[MeSH:NoExp] OR Cardiotox*[Title/Abstract] OR nephrotox*[Title/Abstract] OR immunotox*[Title/Abstract] OR hepatotox*[Title/Abstract] OR cytotox*[Title/Abstract] OR "Cytotoxicity, Immunologic"[MeSH:NoExp] OR immunocytotox*[Title/Abstract] OR intoxication[Title/Abstract] OR "Congenital, Hereditary, and Neonatal Diseases and Abnormalities"[MeSH Terms] OR "Treatment Failure"[MeSH Terms] OR "Case Reports"[Publication Type] OR case report*[Title/Abstract] OR "Environmental Exposure"[MeSH Terms] OR "Contraindications"[MeSH Terms] OR "Wounds and Injuries"[MeSH Terms] OR "Suicide"[MeSH:NoExp] OR suicide[Title/Abstract] OR "Poisoning"[MeSH Terms] OR "Drug Tolerance"[Majr] OR "Drug Resistance"[MeSH Terms] OR "Substance-Related Disorders"[MeSH Terms]) AND (inprocess[sb] OR medline[sb]) AND ("humans"[MeSH Terms] OR "humans"[All Fields] OR "human"[All Fields])*

**Search string glossary:**

- *: wildcard – anything following that string
- inprocess[sb]: MeSH terms will be assigned if the subject of the article is within the scope of MEDLINE.
- medline[sb]: Citations that have been indexed with MeSH terms, Publication Types, Substance Names, etc.
- MeSH: MeSH (Medical Subject Headings) is the NLM controlled vocabulary thesaurus used for indexing articles for PubMed.

- NoExp: MeSH terms include the more specific Subheading and Terms under the MeSH term in a search. To turn off this automatic feature, the search syntax [MeSH:noexp] is used for some specific MeSH terms, e.g., Carcinogens [MeSH:noexp].
- The MeSH term 'Drug-Related Side Effects and Adverse Reactions' includes the following terms: 'Drug Related Side Effects and Adverse Reactions', 'Drug-Related Side Effects and Adverse Reaction', 'Drug Related Side Effects and Adverse Reaction', 'Drug Side Effects', 'Drug Side Effect', 'Effects, Drug Side', 'Side Effect, Drug', 'Side Effects, Drug', 'Adverse Drug Reaction', 'Adverse Drug Reactions', 'Drug Reaction, Adverse', 'Drug Reactions, Adverse', 'Reactions, Adverse Drug', 'Adverse Drug Event', 'Adverse Drug Events', 'Drug Event, Adverse', 'Drug Events, Adverse', 'Side Effects of Drugs', 'Drug Toxicity', 'Toxicity, Drug', 'Drug Toxicities' and 'Toxicities, Drug'. Therefore, these terms are not called out as specific search terms.
